

BMS-ASIC-8800 16-Channel Battery Monitoring IC Datasheet

Semiconductor Component Specification & Absolute Maximum Ratings

1. Absolute Maximum Electrical Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.

- Parameter: High-Voltage Common-Mode Standoff Voltage (V_HVCM)
- Absolute Maximum Ratings: Maximum continuous common-mode voltage rating is limited to 750.0 V DC. Operating above 750 V DC v
- Operating Voltage (Cell Inputs): -0.3 V to +6.0 V per channel.

2. CAN-FD Transceiver Physical Interface

- Parameter: Bus Common-Mode Operating Range (V_CANCM)
- Absolute Maximum Ratings: Maximum continuous common-mode voltage range is -7.0 V to +7.0 V DC. Operation beyond ± 7 V causes
- Differential input threshold: 0.5 V to 0.9 V.

3. Cell Balancing Switch Dissipation

- Maximum on-chip balancing switch continuous dissipation: 250 mW per package.
- Balancing current derating curves require external bypass transistors for currents above 100 mA.
